StelnKuehler C., Tomel L., de Francesco R., Kuo L.C., Chen Z.;

"Complex of NS3 protease and NS4A peptide of BK strain hepatitis C
virus: a 2.2-A resolution structure in a hexagonal crystal form.";

Protein Sci. 7:837-847(1998).

- 1- FUNCTION: THE SMALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE
HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.

NS3 AND NS5 MAY PLAX A ROLE IN THE VIRAL RNA REPLICATION.

C -1- CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral postition, Cys or Thr in pl and Ser or Ala in Pl'.

C -1- CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate +
                                                                                                                                                                                                                                                                                                                                                                                  [RNA](N).
-1- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIPOPROTEIN ENVELOPE CONSIGNS OF TWO PROTEINS:
PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.

FUNCTION: NSSB IS A RNA-DEPENDENT RNA POLYMERASE THAT PLAYS AN
ESSENTIAL ROLE IN THE VIRUS REPLICATION.
CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral
precursor polyprotein, commonly with Asp or Glu in the P6
position, Cys or Thr in P1 and Ser or Ala in P1'.
CATALYTIC ACTIVITY: N nucleoside triphosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               LOJAY CRYSTALLOGRAPHY (2.2 ANGSTROMS) OF 1192-1657.

THE ENVELOPE CONSISTS OF TWO PROTEINS: E1 AND E2. THE NUCLECCAPSID IS A COMPLEX OF PROTEIN C AND MRNA. PTM: THE STRUCTURAL PROTEINS C, E1 AND E2 ARE PRODUCED BY PROTEOLYTIC PROCESSING BY THE HOST SIGNAL PEPTIDASES. SIMILARITY: THE NS3 PROTEASE BELONGS TO PEPTIDASE FAMILY U39. SIMILARITY: THE NS3 PROTEASE BELONGS TO PEPTIDASE FAMILY S29.

-I- FUNCTION: THE SMALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION. NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.
-I- CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral precursor polyprotein, commonly with Asp or Glu in the P6
                    MEDLINE-92230232; PubMed-1314459;

THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.

SIMILARITY: THE PROTEASE BELONGS TO PEPTIDASE FAMILY 529.
                                                                                                                                                                                                                                              precursor polyprotein, commonly with Asp or Glu in the P6 position, Cys or Thr in P1 and Ser or Ala in P1', CATALYTIC ACTIVITY: N nucleoside triphosphate - N diphosphate (RNA)(N).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Interpro; IPR002518; HCV_NS2.

Wosefulness and limitation of phylogenetic analysis for hepatitis c
virus core region: application to isolates from Egiptian and Yemeni
patients.;
-1- SUBUNT: THE VIRION OF THIS VIRIS IS A NUCLEOCAPSID COVERED BY A
LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN MAND GIXCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF
PROTEIN MANA (BY SIMILARITY).

"Genetic variability of hepatitis C virus in Mestern Siberia.";
Submitted (APR-2702) to the EMBL/GenBank/DDBJ databases.
-1- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA (BY SIMILARITY).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 191, A Sequence 192, A Sequence 6, Apr

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 25, Application US/08921887

Patent No. 6030771

GENERAL INFORMATION:

APPLICANT: KHUDYAKOV, YURI E.

APPLICANT: FIELDS, HOWARD A.

TITLE OF INVENTION: MOSAIC PROTEIN AND RESTRICTION

TITLE OF INVENTION: ENDONUCLEASE ASSISTED LIGATION METHOD FOR MAKING THE SAME NUMBER OF SEQUENCES: 55

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GENERAL INFORMATION:
APPLICANT: DALBON, Pascal
APPLICANT: DALBON, Michel
APPLICANT: JOLIVET, Michel
TITLE OF INVENTION: SYNTHERIC POLYPEPTIDES BELONGING TO THE
TITLE OF INVENTION: HEPATITIS C VIRUS (HCV) AND WHICH CAN BE USED ESPECIALLY
TITLE OF INVENTION: FOR DETECTING THE LATTER
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                    Sequence 192, Application US/08635886C
Patent No. 6555114
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: DELEYS, ROBERT
APPLICANT: DELEYS, ROBERT
TITLE OF INVENTION: UNUS
TITLE OF INVENTION: IMMUNDOMINANT HUMAN T CELL EPITOPES OF HEPATITIS C
TITLE OF INVENTION: IMMUNDOMINANT HUMAN T CELL EPITOPES OF HEPATITIS C
TITLE OF INVENTION: IMMUNDOMINANT HUMAN T CELL EPITOPES OF HEPATITIS C
TITLE OF INVENTION: IMMUNDOMINANT HUMAN T CELL EPITOPES OF HEPATITIS C
TITLE OF INVENTION: IMMUSER: US/08/635,886C
CURRENT FILING DATE: 1996-04-25
PRIOR PLICATION NUMBER: EP 93402718.6
PRIOR PLICATION NUMBER: EP 93402718.6
PRIOR FILING DATE: 1993-11-04
NUMBER OF SEQ ID NOS: 286

Patent NO. 6235284

GENERAL INFORMATION:
APPLICANT: DAILORN: Michel
APPLICANT: JOLIVET, Michel
TITLE OF INVENTION: SYNTHETIC POLYPEPTIDES BELONGING TO THE
TITLE OF INVENTION: HEPATITIS C VIRUS (HCV) AND WHICH CAN BE USED ESPECIALLY
TITLE OF INVENTION: FOR DETECTING THE LATTER
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:

Substitute polyprotein - hepatitis C virus (genotype 1, N7) (fragment)
N.Contains: core protein
N.Contains: core protein
N.Contains: core protein
N.Contains: core protein
A.Variety: genotype 1, N7
C.Date: 19-May-1994 #sequence_revision 26-Jul-1996 #text_change 17-Nov-2000
C.Accession: $41349
R.Yan Doorn, L.J.: Kleter, G.E.M.; Brouwer, J.T.
Submitted to the EMBL Data Library, January 1994
A.Description: Analysis of hepatitis C virus genotypes 1 to 5 by LiPA.
A.Reference number: $41341
A.Accession: $41349
A.Molecule type: genomic RNA
A.Residues: 1-115 cVAN>
A.Kesidues: 1-115 cVAN>
A.Cross -references: EMBL: 229452; NID: 9443866; PIDN: CAA82590.1; PID: 9443867
A.Experimental source: genotype 1, N7
C.Superfamily: hepatitis C virus genome polyprotein
C.Keywords: capsid protein; core protein; polyprotein
F.1-115/Product: core protein #status predicted <MAT>

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polyprotein

$19875
genome polyprotein - hepatitis C virus (isolate JK3) (fragment)
(Contains: core protein; envelope protein 1; nonstructural protein 2; NSI/E2 protein C; Species: hepatitis C virus
A; Variety: isolate JK3
C; Date: 30-Jun-1992 #sequence_revision 30-Jun-1992 #text_change 17-Nov-2000
C; Accession: S19875
R; Honda, M.; Kaneko, S.; Masashi, U.; Kobayashi, K.; Murakami, S.
S: Milted to the EMBL Data Library, September 1991
Scription: Sequence analysis of putative structural regions of Hepatitis C Virus iso
                                                                                                                                                                                                                                                                                                       RESULT 3

genome polyprotein - hepatitis C virus (genotype 1, N6) (fragment)
C; Species: hepatitis C virus
C; Species: hepatitis C virus
A; Variety: genotype 1, N6
C; Date: 19-May-1994 #sequence_revision 26-Jul-1996 #text_change 17-Nov-2000
C; Accession: $41349
R; Van Doorn, L.J.; Kleter, G.E.M.; Brouwer, J.T.
Submitted to the EMBL Data Library, January 1994
A; Description: Analysis of hepatitis C virus genotypes 1 to 5 by LiPA.
A; Reference number: $41341
A; Accession: $41348
A; Molecule type: genomic RNA
A; Accession: $41348
A; Molecule type: genomic RNA
A; Residues: 1-108 < VANN
A; Cross-references: EMBL: 229451
A; Experimental source: genotype 1, N6
C; Superfamily: hepatitis C virus genome polyprotein
C; Keywords: capsid protein; core protein; polyprotein
F; 1-108/Product: core protein #status predicted < WAT>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Grand polyprotein - hepatitis C virus (genotype 5, N5) (fragment)
N;Contains: core protein
C;Species: hepatitis C virus
A;Variety: genotype 5, N5
C;Date: 19-May-1994 *sequence_revision 26-Jul-1996 *text_change 17-Nov-2000
C;Accession: 841371

                                            C.Species: hepatitis C virus
A;Variety: genotype 5, N2
C;Date: 19-May-1994 #sequence_revision 26-Jul-1996 #text_change 17-Nov-2000
C;Accession: S41368
R;van Doorn, L.J.; Kleter, G.E.M.; Brouwer, J.T.
submitted to the EMBL Data Library, January 1994
A;Description: Analysis of hepatitis C virus genotypes 1 to 5 by LiPA.
A;Reference number: S41341
                                                                                                                                                                                                                                                                                                                                                          A)Cross-references: EMBL:229471; NID:9443904; PIDN:CAA82609.1; PID:9443905

-!- FUNCTION: THE SMALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION. NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.

-!- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY LIPOPROTEIN ENVELOPE THE ENVELOPE CONSISTS OF TWO PROTEINS: PROTEIN A ND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Hepatitis C virus (isolate HC-J5) (HCV).

-!- FUNCTION: THE SMALL PROTEINS NSZA, NSZB, NS4A AND NS4B ARE HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.

NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.

-!- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MEDLINE-92230232; PubMed-1314459; Okamamoto K., Lizuka H., Okamoto H., Kurai K., Okada S.I., Yamamoto K., Lizuka H., Tanaka T., Fukuda S., Tsuda F., Mishiro S.; "Full-length sequence of a hepatitis C virus genome having poor homology to reported isolates: comparative study of four distinct genotypes.";

66n0me polyprotein (Contains: Capsid protein C (Core protein) (P22);
Envelope glycoprotein El (GP32) (GP35); Envelope glycoprotein E2
(GP68) (GP70) (NS1); Protein P7: Nonstructural protein NS2 (P21)
(EC 3.4.22.-); Protease/helicase NS3 (P70) (Hepacivirin)
(EC 3.4.21.98); Nonstructural protein NS4A (P4); Nonstructural protein
NS5B (P65) (P70) (RNA-directed RNA polymerase) (EC 2.7.7.48)].
                                                                                                                                                                                                                                                                                                               MAJOR ENVELOPE PROTEIN E (POTENTIAL).
NONSTRUCTURAL PROTEIN NSI/E2 (POTENTIAL).
NONSTRUCTURAL PROTEIN NS2 (POTENTIAL).
